PROFILE

Dynamic Senior FullStack Software Engineer with over 14 years of expertise in architecting and delivering web & mobile applications. Proficient in leveraging .NET, PHP, JS, and modern frameworks to create high-performance, scalable solutions. A strong advocate for clean code practices and agile methodologies, ensuring seamless collaboration across teams. Proven ability to integrate complex systems and optimize development processes, consistently driving value for diverse clientele. Passionate about innovation and committed to delivering user-centric products that meet evolving business needs.

EMPLOYMENT HISTORY

Senior Software Engineer at Bixly, Fresno, California
January 2017 — June 2021

- Led architecture and delivery of scalable software platforms, including appointment scheduling and notification systems.
- Designed and deployed high-performance full-stack solutions using C#/.NET and PHP.
- Developed Shopify applications, focusing on app integrations and store submissions.
- Spearheaded cloud-based deployments, optimizing CI/CD pipelines for efficiency.
- Ensured secure integrations with external services and upheld code quality through TDD practices.

Backend Developer at Quest, San Francisco, California
September 2014 — January 2017

- Developed backend systems for a suite of scheduling and management tools using .NET Core and PHP.
- Implemented robust database structures and optimized SQL queries to support high-load, multi-tenant architecture.
- Integrated third-party services, including external APIs and merchant tools, to extend product capabilities.
- Contributed to the development and deployment of custom Shopify plugins and features tailored for client-specific use cases.

Software Engineer at Tepia Co, Costa Mesa, California
April 2008 — April 2014

- Built and maintained full-stack web applications using Laravel, React, and Vue.js for internal tools and customer platforms.
- Developed RESTful APIs and CMS features to enhance dynamic content and booking functionality.
- Managed deployments and infrastructure through AWS, GCP, and Azure DevOps pipelines.
- Conducted code reviews and contributed to frontend development with modern UI libraries for scalability.
- Collaborated with cross-functional teams to define project requirements and enhance software solutions.
